

SCREEN CHECK

POLAROID COMMERCIAL ID SYSTEMS
NORTH AMERICA

CardCoach ID

Innovative software from the brand you know in imaging solutions.

ID ^{CardCoach} Ultra

Upgrade your ID solution to ScreenCheck's most advanced ID software. CardCoach ID Ultra integrates seamlessly with ScreenCheck's optional plug-ins for turnkey mifare and iClass encoding and biometric capture. The Ultra version connects to sophisticated databases through ODBC. For the more advanced card programs, ID

Ultra provides engineers the tools to completely develop the user interface while utilizing ID Ultra's print and capture tools. CardCoach ID Ultra does not require a hardware dongle and uses a software code to license the application. Additionally, ID Ultra provides a turnkey upgrade path from previous Polaroid ID Card Maker 4.02M installs.

ScreenCheck's CardCoach ID Pro utilizes a software code for its licensing mechanism and it does not require a hardware dongle. ID Pro provides a MS Access database for storing records, and the installation is upgradeable to CardCoach ID Ultra if the card program grows in complexity. ID Pro is the ideal card issuance solution for identification, registration, access control, and time and attendance applications.

ID ^{CardCoach} Pro

CardCoach ID Express contains all the features found in CardCoach ID Pro. ID Express is available at a lower cost

and it limits the MS Access database to 100 records. If more records or advanced features are required, ID Express is seamlessly upgradeable to CardCoach ID Pro or CardCoach ID Ultra. ID Express is the ideal application for those customers testing ID software and for users with limited database requirements.
